

CEI MVR Monitoring: Remove the Visibility Gap and Lessen Your Liability

CUSTOMER SITUATION

A fleet with more than 7,000 drivers ran an annual MVR campaign that uncovered shocking results about some driving records and behaviors. One driver amassed 80+ points on their driving record, resulting from speeding tickets and multiple instances of failure to appear in court or pay fines. The campaign showed a surprising number of drivers with licences suspended between MVR campaigns, as well as drivers who received points on their license, yet did not receive training or remediation, causing them to move up in risk levels. These results begged the question, “How many more drivers like this are there?” Annual and biannual MVR campaigns leave 180 – 365-day visibility gaps where high-risk drivers go unnoticed.

CEI SOLUTION

CEI’s MVR Monitor keeps a baseline record for every driver and scans for any negative change to motor vehicle records. MVR Monitor automatically flags and pulls your driver’s MVR the same day a violation enters their local DMV’s database, eliminating the visibility gap altogether. Paired with DriverCare Risk Manager, MVR Monitor allows for timely risk scoring and training to remediate drivers and ensure the entire fleet is compliant with valid licenses at all times. This actionable approach ensures unsafe or suspended drivers never go unnoticed or neglected, which not only reduces obvious road risks but also decreases the chance for a negligent entrustment suit.

The customer is thankful these drivers were not involved in a collision during the visibility gap and is implementing MVR Monitor.
